

# Why you need a password manager for your clients

# The average cost of a business data breach is \$4.24 million.

With 82% of breaches involving a human element, adding a password manager to each employee's set of company tools is an important preventative measure against threats.

Trusted by over 175,000 businesses, 1Password makes it easy for entire organizations to create strong, unique passwords, share sensitive information securely, and log in with a single tap or a click.

This means technicians spend less time resetting passwords or setting up new users, creating time they can use to focus on other valuable work. It'll also help your team get an overview of your clients security health while acting as a single source of truth for all digital secrets.

# Secure your business by securing your people across departments

## **Security visibility for all teams**

- Get an at-a-glance view of your security posture anytime by integrating 1Password with your existing SIEM tool to centralize your client's security solutions.
- Identify real time security issues, like reused passwords, compromised passwords, and more with 1Password Watchtower.

## **Control who has access to what information**

- Save your IT team's time and resources – so they can focus on other tasks – by employing admin controls that make it easy to add or remove users, recover accounts, reset passwords, manage permissions, and even grant access to vaults for guest users.
- Keep all of your client's data safe and secure by creating separate vaults based on team, department, or need, thus limiting who has access to privileged company information.
- Technicians can be assigned access permissions for each managed companies, providing MSPs with a clear view of who has access to what, all in one place.

## **Easy for every team member to use**

- Encourage strong security habits, both at work and at home, with a free 1Password Families account for every licensed user.
- Defend against security and breach risk from bad actors. Protect every account with easily generated and auto-filled strong, unique passwords to safeguard your client's data.
- Allow employees to quickly access, manage, and securely share sensitive information with the right people, at the right time.

## **Save time**

- Save your team's time by making it easier for them to login with autofill, create strong, unique passwords, and auto-save their logins.
- Integrate with your SSO provider to quickly provision new users and safely give each employee access to company data, all through one login.
- Help teams sign in faster so they can stay productive throughout the day, avoid potential errors and time spent in manual filling, or waiting for password resets.

# 1Password for you and your clients

---

Protecting your business starts with protecting all of your people and your clients people. Every team has sensitive information to store and share. With 1Password, it's easier for everyone to share things securely.

## **Legal**

A centralized and secure solution to store contracts, templates, and NDAs. Safely share confidential documents or contracts with cross functional team members for review. Use granular controls for read-only documents outside of legal.

## **HR**

Safely store and share employee records, frequently used onboarding and offboarding docs, and login credentials. Limit access to sensitive employee information and only share with those who need access through specific vaults.

## **Finance**

Securely store and share documents, spreadsheet files, login credentials, and credit card details. Restrict employee access based on passwords, firewall, and 2FA policies.

## **Marketing**

Securely share pre-launch documents with external partners or contractors. Employ access controls for confidential or pre-launch files. Share logins to analytics or reporting dashboards with only the team members who need access.

# Securing your business starts with 1Password

- Secure company information
- Control access to company resources
- Balance security and productivity
